

Jonathan Cruz

SENIOR SOFTWARE ENGINEER · FULL-STACK TYPESCRIPT

📍 SÃO PAULO, BRAZIL ✉ JONATHAN.WILLIAN.TOD@GMAIL.COM 🌐 AKAMURAASAI 🔗 AKAMURAASAI.WORK

PROFILE

"Senior full-stack engineer with 10+ years shipping products end-to-end at startups – from ideation through schema and API design to UI polish. Deep TypeScript in a monorepo (Nx + NestJS + React + Next.js), serverless Node.js on AWS Lambda, AWS data services, and MySQL/PostgreSQL operations. Owned major features without a PM, partnered directly with non-technical stakeholders (compliance, finance, ops), and built tools real users depend on. Daily user of Claude Code as a force multiplier for shipping in lean teams."

PROFESSIONAL EXPERIENCE SELECTED ROLES & CONTRIBUTIONS

FINTECH PLATFORM

Sydecar

FULL-STACK SOFTWARE ENGINEER

Ideation to Delivery

OWN FULL FEATURES

Drove Billing V2 end-to-end without a PM: discovery with compliance/finance/product, ADR, schema and API design (ts-rest + Zod), backend implementation in NestJS, admin UI in React/Next.js, deploy, then validated adoption. Same ownership across KYC/EDD (UBO, FinCEN, CTA), ts-rest migration, and webhook standardization.

END-TO-END OWNERSHIP ADRS

TypeScript Monorepo

NX + NESTJS + REACT

Operate across an Nx monorepo of dozens of NestJS libraries and React/Next.js apps. Modern React patterns (hooks, context, Redux-style state, TanStack Query for data fetching, Zod runtime validation). End-to-end TypeScript discipline across server and client.

TYPESCRIPT NX REACT NESTJS

Serverless

AWS LAMBDA SERVICES

Built and operated serverless services on AWS Lambda. Earlier at Zax: deployed full AWS infrastructure (EC2, ECS, S3, Lambda, VPCs) including S3/CloudFront-style static hosting for web apps. Comfortable with the AWS Lambda + storage + queue ecosystem.

AWS LAMBDA S3 CLOUDFRONT SERVERLESS

AI Force Multiplier

CLAUDE CODE DAILY

Claude Code is a core part of my daily workflow: sub-agent orchestration for parallel exploration, custom project skills, MCP integrations, pre/post-tool hooks. Use AI for code generation, eval-style review, and architecture exploration in real production code — directly boosts shipping velocity in small teams.

CLAUDE CODE AI TOOLING MCP

Experimentation Mindset

TESTS + VALIDATION

Built full E2E test suite for QuickBooks integration with Playwright and Cucumber BDD. Validate features after launch — measure usage, iterate. Same exploration/learning loop applies to A/B experimentation infrastructure.

PLAYWRIGHT CUCUMBER BDD VALIDATION

Event-driven & Queueing

BULLMQ + REDIS

Standardized event delivery using BullMQ Pro with exponential backoff and the outbox pattern. Global per-deal ordering via Redis INCR counters with deterministic predecessor lookup — primitives transferable to SQS/Kinesis-style event pipelines.

BULLMQ OUTBOX REDIS EVENT-DRIVEN

Customer Empathy

NON-TECHNICAL STAKEHOLDERS

Partner directly with compliance officers, finance ops, and product — translate manual workflows into reliable systems. Same empathy applies to e-commerce merchants making pricing and personalization decisions.

CROSS-FUNCTIONAL DISCOVERY EMPATHY

MAY 2023 — PRESENT
SAN FRANCISCO, CA (REMOTE)

B2B COMMERCE PLATFORM Zax SR SOFTWARE ENGINEER JAN 2019 — MAY 2023 SÃO PAULO	Commerce Platform REACT NATIVE + NEXT.JS + GRAPHQL Built from scratch a B2B wholesale ordering platform with React Native for mobile, React/Next.js for web, TypeScript, and GraphQL. Integrated payment flows and credit-limit validation across the stack. Direct experience with commerce flows: cart, pricing, ordering, fulfillment. COMMERCE REACT NATIVE NEXT.JS GRAPHQL AWS Production HIGH-TRAFFIC OPERATIONS Deployed and operated full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) with serverless React/Next.js apps. Containerized services with Docker (dockerized Lambdas equivalent). Owned operational health of high-traffic B2B workloads. AWS ECS DOCKER LAMBDA CI/CD VELOCITY IN LEAN TEAMS Configured end-to-end pipeline with GitHub Actions, Fastlane, and Code Climate. Reduced release cycle from weeks to days — shipping velocity as a feature. GITHUB ACTIONS FASTLANE CI/CD
CONSUMER WEB + MOBILE Netlolo SR SOFTWARE ENGINEER SEP 2018 — JAN 2019 SÃO PAULO	Client-side Plugin SDK COMPILED TYPESCRIPT Designed and shipped a chat SDK as compiled client-side TypeScript embedded in third-party business apps — persistent connections, message ordering, low-latency delivery. Same client-side plugin pattern as the Intelligems experimentation plugin. CLIENT-SIDE SDK COMPILED TYPESCRIPT EMBEDDED Consumer Product REACT NATIVE + WEB3 Built a mobile and web product bringing cryptocurrency to mainstream users with React Native and TypeScript, integrating Web3 smart contracts on Ethereum. REACT NATIVE TYPESCRIPT WEB3 Zero-downtime CI/CD CONTINUOUS DEPLOYMENT Built CI/CD automations ensuring continuous deployment with no service interruption. PostgreSQL with Hasura as the GraphQL layer. POSTGRESQL HASURA CI/CD
CONSUMER PLATFORM Escale SR SOFTWARE ENGINEER JAN 2018 — SEP 2018 SÃO PAULO	Mentorship TECH TALKS Led internal Tech Talks on RESTful design, Functional Programming, and Microservices architecture, coaching engineers across product teams. Established service-boundary and API-contract patterns adopted across the engineering org. MENTORSHIP TECH TALKS MICROSERVICES Multi-DB Operations PERSISTENCE SELECTION Built the product foundation with React, Redux, and a Node.js/TypeScript backend. Selected MySQL, PostgreSQL, MongoDB per service responsibility — hands-on with MySQL operations and schema design. MYSQL POSTGRESQL MONGODB CIRCLECI
BACKEND MODERNIZATION PraValer PL SOFTWARE ENGINEER JUN 2017 — JAN 2018 SÃO PAULO	Legacy → Modern PHP TO NODE Migrated legacy PHP origination platform to Node.js/Express for a student loans product. Modernized the API surface while preserving downstream compatibility. NODE.JS EXPRESS LEGACY MIGRATION SQL Performance SCHEMA & INDEXING Restructured PostgreSQL transactional tables with improved schemas and indexes, eliminating N+1 queries and reducing query times by an order of magnitude. POSTGRESQL MONGODB QUERY OPTIMIZATION

CORE SKILLS

Typescript Monorepo

TypeScript, Nx, React (hooks, context, Redux), Next.js, NestJS, Node.js, GraphQL, REST APIs, ts-rest, Zod, ReactQuery / TanStack Query

AWS Serverless

AWS Lambda, S3, CloudFront, ECS, VPC, EventBridge, Docker (dockerized lambdas), CI/CD (GitHub Actions, Fastlane)

Data

PostgreSQL (deep), MySQL, MongoDB, Redis, Schema design, Query optimization, Indexing

Event-Driven & Queueing

BullMQ, Outbox pattern, Redis ordering, Webhook deduplication, Idempotency

AI Engineering

Claude Code (daily), Sub-agent orchestration, MCP servers, Custom skills/hooks, Prompt engineering

Quality & Validation

Jest, Playwright, Cucumber BDD, TDD, Datadog observability

Mindset

End-to-end ownership, Startup velocity, Cross-functional partnership, Customer empathy, Experimentation
