🌐 AKAMURAASAI

🔗 AKAMURAASAI.WORK

## PROFILE

*"Senior fullstack engineer with 10+ years shipping products end-to-end at startups — owning full products, not features. Deep TypeScript across the stack: React, Next.js, React Native, Node.js, NestJS, GraphQL, AWS. Power user of Claude Code as a daily force multiplier — sub-agents, custom skills, MCP integrations, hooks. Driven by ownership and impact: have led major architectural decisions through ADRs without a PM, partnered directly with non-technical stakeholders, and shipped under real production traffic. Care about how products feel, not just whether they compile."*

## PROFESSIONAL EXPERIENCE

## SELECTED ROLES & CONTRIBUTIONS

### FINTECH STARTUP

#### Sydecar

FULL-STACK SOFTWARE ENGINEER

#### Founding-style Ownership

FULL PRODUCT, NO PM

Drove Billing V2 from zero: wrote the ADR, ran stakeholder discovery, defined the architecture, implemented backend + admin UI, deployed, then validated adoption. Same pattern across KYC/EDD (UBO, FinCEN, CTA), ts-rest migration, and webhook standardization. Pushed back on requirements when the ask didn't match the real problem.

OWNERSHIP

ADRS

END-TO-END

#### AI Force Multiplier

CLAUDE CODE DAILY

Claude Code is a core part of my daily workflow: sub-agent orchestration for parallel exploration, custom project skills, MCP server integrations, pre/post-tool hooks for guardrails, project-level specifications. Use AI for code generation, eval-style review, test scaffolding, and architecture exploration — applied to real production code, not toy experiments.

CLAUDE CODE

MCP

SUB-AGENTS

AI TOOLING

#### Production React + TypeScript

HIGH-STAKES UIs

Built admin dashboards, internal operational tools, and stakeholder-facing UIs across an Nx monorepo of dozens of React/Next.js apps and NestJS libraries. Modern React (hooks, context), TanStack Query, Zod for runtime validation. UIs that have to be right on the first try — they drive compliance and financial decisions.

REACT

NEXT.JS

TYPESCRIPT

HIGH-STAKES UI

#### Real-time Data Sync

EVENT-DRIVEN ARCHITECTURE

Designed and shipped event-driven workflows using BullMQ Pro with exponential backoff and the outbox pattern (persist resolution first, enqueue after). Global per-deal ordering via Redis INCR counters with deterministic predecessor lookup — auditable, reconstructable event chains.

REAL-TIME

EVENT-DRIVEN

BULLMQ

REDIS

#### Backend Ownership

NODE.JS + GRAPHQL HERITAGE

Operate NestJS (Node.js) backend with REST + ts-rest contracts, Prisma + PostgreSQL, OAuth 2.0, idempotency interceptors, and webhook deduplication. Earlier roles included GraphQL APIs (Hasura, Apollo) on top of PostgreSQL — comfortable across both contract styles.

NODE.JS

GRAPHQL

PRISMA

POSTGRESQL

#### Setting the Bar

PATTERNS + CODE REVIEWS

Drove architecture decisions via ADRs and shared CLAUDE.md project-level conventions. Reviewed PRs, mentored mid-to-senior engineers, established patterns adopted across team workflows.

CORE SKILLS

FULLSTACK

TypeScript, React (hooks, context, Redux), Next.js, React Native, Node.js, NestJS, GraphQL, REST APIs, ts-rest, Zod

AI TOOLING

Claude Code (daily), Sub-agent orchestration, MCP servers, Custom skills/hooks, Spec-driven workflows, Prompt engineering

REAL-TIME & DISTRIBUTED

BullMQ, Outbox pattern, Idempotency, Redis, Event ordering, XMPP, Persistent connections

CLOUD & INFRA

AWS (EC2/ECS/S3/Lambda/VPC), GCP, Docker, CI/CD (GitHub Actions, Fastlane, CircleCI), Nx Monorepo

DATA

PostgreSQL (deep), MySQL, MongoDB, Redis, Prisma, Schema design, Query optimization

FOUNDING MINDSET

ADRs, Product opinions, Stakeholder discovery, Cross-functional partnership, Mentorship, Standards-setting

LANGUAGES

PORTUGUESE

Native

ENGLISH
