

Jonathan Cruz

PRINCIPAL SOFTWARE ENGINEER · AI-AUGMENTED ENGINEERING

📍 SÃO PAULO, BRAZIL ✉ JONATHAN.WILLIAN.TOD@GMAIL.COM 🌐 AKAMURAASAI 🔗 AKAMURAASAI.WORK

PROFILE

"Senior engineer with over 10 years building consumer and B2B platforms across web and mobile, with a strong focus on portfolio-level engineering excellence. Daily practitioner of AI-augmented engineering — sub-agent orchestration, spec-driven workflows, and agentic code generation/review pipelines. Deep TypeScript expertise across the stack with React/React Native, NestJS, Prisma, and Nx monorepos. Track record of mentoring engineers from junior to senior, modernizing legacy systems, and shipping reliable solutions in regulated and high-availability environments."

PROFESSIONAL EXPERIENCE

SELECTED ROLES & CONTRIBUTIONS

AI-
Augmented
Engineering
AGENTIC WORKFLOWS

Daily user of agentic coding tools (Claude Code) with sub-agent orchestration, custom skills, project-level CLAUDE.md specifications, and pre/post-tool hooks. Apply spec-driven workflows for code generation, test scaffolding, code review, and architectural exploration — pairing AI execution layers with knowledge-centric project conventions to maintain quality at high iteration speed.

- AGENTIC WORKFLOWS
- SPEC-DRIVEN
- SUB-AGENTS

Nx
Monorepo
CROSS-TEAM
ARCHITECTURE

Operate inside an Nx monorepo spanning dozens of NestJS libraries and React/Next.js apps. Drive cross-library architectural decisions (ADRs), enforce module boundaries, and coordinate changes across product teams to keep delivery flowing without blocking parallel workstreams.

- NX
- MONOREPO
- ADR
- NESTJS

Complex
Backend
Systems
POSTGRES

Designed and implemented Enhanced Due Diligence with LP funding blocks, UBO verification, FinCEN integration, and CTA compliance. Built race-resistant flows with re-check inside to handle concurrent edits (409 EMAIL_NOW_EXISTS). Contributed to a proprietary double-entry ledger with append-only entries, deterministic idempotency keys, and event-driven posting.

- POSTGRES
- PRISMA
- CONCURRENCY
- COMPLIANCE

Fault
Tolerance
EVENT-DRIVEN

Standardized event delivery using BullMQ Pro with exponential backoff (5 retries / 3s base; 20 retries / 10s base in pubsub). Outbox pattern: persist resolution first, enqueue after — jobs idempotent and survive enqueue failure. Global per-deal ordering via Redis INCR counters with deterministic predecessor lookup ().

- BULLMQ
- REDIS
- OUTBOX
- EVENT-DRIVEN

External
Integrations
CROSS-ORG
COLLABORATION

Built bidirectional QuickBooks invoice sync engine with state validation, auto-sync on approval, full E2E suite with Playwright and Cucumber BDD. Worked on Plaid Link integration with processor tokens powering ACH via Treasury Prime, including mock banking engine for local sandbox.

- PLAID
- TREASURY PRIME
- QUICKBOOKS
- PLAYWRIGHT

Type-safe
Contracts
DX EXCELLENCE

Designed (ADR) and implemented Billing V2 with quarterly fee scheduler and billing model versioning. Migrated legacy controllers (auth, onboarding, admin) to type-safe ts-rest contracts with Zod schemas — improving developer experience and contract reliability end-to-end.

B2B OMNICHANNEL WHOLESALE

Zax

SR SOFTWARE ENGINEER

JAN 2019 — MAY 2023
SÃO PAULO

Omnichannel Platform

MOBILE + WEB

Built from scratch a wholesale ordering app integrating mobile and web channels for business partners, with credit-limit validation and order-to-cash flows, using React Native, TypeScript, and GraphQL.

REACT NATIVE

TYPESCRIPT

GRAPHQL

Scalable Cloud

AWS

Deployed full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) with serverless web apps using React and Next.js. Containerized services with Docker for consistent dev-to-prod parity.

AWS

NEXT.JS

SERVERLESS

DOCKER

Engineering Excellence

CI/CD

Configured end-to-end delivery pipeline with GitHub Actions, Fastlane, and Code Climate for automated quality gates. Reduced release cycle from weeks to days.

SR SOFTWARE ENGINEER

SEP 2018 — JAN 2019
SÃO PAULO

Consumer Product

REACT NATIVE

Built a mobile and web product bringing cryptocurrency to mainstream users with React Native and TypeScript, integrating Web3 smart contracts on Ethereum. Demonstrated interest in researching and shipping alternative/emerging web technologies.

REACT NATIVE

TYPESCRIPT

WEB3

Real-time Systems

SDK

Developed a chat SDK for businesses using React Native and React/Redux, powered by XMPP and a Java backend for low-latency real-time messaging across multiple client integrations.

REACT

REDUX

XMPP

JAVA

Zero Downtime

DOWNTIME

Built CI/CD automations ensuring continuous deployment with no service interruption. PostgreSQL with Hasura as the GraphQL layer.

Mentorship

ENGINEERING CULTURE

Led internal Tech Talks on RESTful design, Functional Programming, and Microservices architecture, coaching engineers across product teams. Established patterns for service boundaries and API contracts adopted across the engineering org.

MENTORSHIP

TECH TALKS

MICROSERVICES

Microservices Architecture

MULTI-DB

Built the product foundation with React, Redux, and a Node.js/TypeScript backend. Selected appropriate persistence per service responsibility — MySQL, PostgreSQL, and MongoDB — driving DB design and tuning decisions.

REACT
