

Jonathan Cruz

SENIOR FULL-STACK ENGINEER · TECHNICAL LEADERSHIP

📍 SÃO PAULO, BRAZIL ✉ JONATHAN.WILLIAN.TOD@GMAIL.COM 🌐 AKAMURAASAI 🔗 AKAMURAASAI.WORK

PROFILE

"Senior full-stack engineer with 10+ years building and leading production systems across web and mobile. Deep TypeScript across the stack (React, Next.js, NestJS, Node.js) with strong PostgreSQL, GraphQL, and REST API expertise. Player-coach mindset: drive technical direction via ADRs, code reviews, and mentorship while remaining hands-on in delivery. Track record of leading initiatives end-to-end in fast-paced environments — engineering-led ownership of complex features without a PM, partnering directly with Product and cross-functional stakeholders to translate requirements into scalable systems."

SELECTED ROLES & CONTRIBUTIONS

FINTech PLATFORM

Sydecar

FULL-STACK SOFTWARE ENGINEER

Technical Leadership

ENGINEERING-LED DELIVERY

Drove the design and delivery of Billing V2 end-to-end without a PM: wrote the ADR, ran stakeholder discovery with Product/compliance/finance, defined architecture, implemented, deployed, then validated adoption. Same pattern across KYC/EDD, ts-rest migration, and webhook standardization. Translated business needs into scalable technical solutions and communicated tradeoffs to technical and non-technical audiences.

TECHNICAL LEADERSHIP ADRS END-TO-END DELIVERY

Mentorship & Code Reviews

ENGINEERING CULTURE

Mentor mid-to-senior engineers through pair sessions, code reviews, and architectural discussions. Contribute to engineering culture via shared patterns and documentation, raising the bar across the team. Review pull requests with constructive feedback and ensure consistent quality standards.

MENTORSHIP CODE REVIEWS ENGINEERING CULTURE

Full-Stack TypeScript

REACT + NESTJS + PRISMA + POSTGRES

Operate across an Nx monorepo of dozens of NestJS libraries and React/Next.js apps. Built admin dashboards, internal operational tools, and stakeholder-facing UIs backed by PostgreSQL via Prisma. Designed and scaled REST + ts-rest APIs in production, plus GraphQL services for internal data access.

TYPESCRIPT REACT NESTJS PRISMA

Data Ingestion & Integration Pipelines — Architected webhook ingestion via (unique) with a PROCESSING/PROCESSED/REJECTED state machine, plus the outbox pattern in the ledger console for reliable event-driven data integration. Standardized event delivery with BullMQ Pro using exponential backoff and Redis-based ordering — the same primitives used in ETL-style workflows.

DATA INGESTION OUTBOX ETL PATTERNS BULLMQ

External Integrations

SALESFORCE-CLASS APIS

Built bidirectional QuickBooks invoice sync with OAuth 2.0, state validation, and auto-sync on approval. Worked on Plaid + Treasury Prime integrations with processor tokens powering ACH. Same patterns and discipline apply to CRM and SaaS platform integrations.

QUICKBOOKS PLAID OAUTH 2.0 INTEGRATIONS

Quality & Documentation

TESTING + ADRS

Built full E2E test suite for QuickBooks integration with Playwright and Cucumber BDD. Drive testing standards (unit, integration, E2E) and documentation through code reviews and shared CLAUDE.md project-level specifications.

PLAYWRIGHT CUCUMBER BDD DOCUMENTATION

MAY 2023 — PRESENT
SAN FRANCISCO, CA (REMOTE)

B2B FULL-STACK PLATFORM Zax SR SOFTWARE ENGINEER JAN 2019 — MAY 2023 SÃO PAULO	Full-Stack Product Ownership MOBILE + WEB Built from scratch a wholesale ordering platform with React Native (mobile), React/Next.js (web), and GraphQL API layer. Owned architecture decisions across mobile and web for 4 years of evolution. Integrated payment flows and credit-limit validation across the stack. REACT NATIVENEXT.JSGRAPHQLTYPESCRIPT Cloud Infrastructure AWS END-TO-END Deployed and operated full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) supporting high-availability B2B workloads. Containerized with Docker. Owned the path from local dev through CI/CD to production deploys. AWSECSDOCKERLAMBDA Delivery Practices CI/CD + QUALITY GATES Configured end-to-end pipeline with GitHub Actions, Fastlane, and Code Climate for automated quality gates. Reduced release cycle from weeks to days. Established CI/CD practices and team conventions adopted across the org. GITHUB ACTIONSFASTLANECI/CD
CONSUMER FULL-STACK Netlolo SR SOFTWARE ENGINEER SEP 2018 — JAN 2019 SÃO PAULO	Real-time Architecture SDK DESIGN Designed and shipped a chat SDK with React Native and React/Redux on top of XMPP and a Java backend — persistent connections, message ordering, low-latency delivery for businesses embedding chat into their apps. System architecture decisions for distributed, multi-tenant use. XMPPREAL-TIMESDKDISTRIBUTED SYSTEMS Consumer Product REACT NATIVE + WEB3 Built a mobile and web product bringing cryptocurrency to mainstream users with React Native and TypeScript, integrating Web3 smart contracts on Ethereum. REACT NATIVETYPESCRIPTWEB3 Zero-downtime CI/CD — Built CI/CD automations ensuring continuous deployment without service interruption. PostgreSQL with Hasura as the GraphQL layer. POSTGRESQLHASURACI/CD
MICROSERVICES PLATFORM Escale SR SOFTWARE ENGINEER JAN 2018 — SEP 2018 SÃO PAULO	Mentorship TECH TALKS LEAD Led internal Tech Talks on RESTful design, Functional Programming, and Microservices architecture, coaching engineers across product teams. Established service-boundary and API-contract patterns adopted across the engineering org. Mentor mindset has carried into every team since. MENTORSHIPTECH TALKSMICROSERVICES Microservices Architecture MULTI-DB Built the product foundation with React, Redux, and Node.js/TypeScript backend across multiple microservices. Drove DB selection per service responsibility — MySQL, PostgreSQL, MongoDB — with hands-on operational ownership. REACTNODE.JSMONGODBCIRCLECI
DATA & BACKEND PraValer PL SOFTWARE ENGINEER JUN 2017 — JAN 2018 SÃO PAULO	Legacy Modernization PHP → NODE Led migration of legacy PHP origination platform to Node.js/Express for a student loans product. Modernized API surface while preserving downstream compatibility. NODE.JSEXPRESSLEGACY MIGRATION Data Modeling POSTGRESQL PERFORMANCE Restructured PostgreSQL transactional tables with improved schemas and indexes, eliminating N+1 queries and reducing query times by an order of magnitude. MongoDB for unstructured logs and request data — early experience with multi-store data design. POSTGRESQLMONGODBDATA MODELING

CORE SKILLS

FULL-STACK

TypeScript, React (hooks, context, Redux), Next.js, React Native, NestJS, Node.js, GraphQL, REST APIs, ts-rest, Zod

DATA & APIS

PostgreSQL (deep), MySQL, MongoDB, Prisma, Schema design, Query optimization, Data modeling

PIPELINES & INTEGRATION

Webhook ingestion, Outbox pattern, BullMQ, Event-driven workflows, OAuth 2.0, Enterprise/SaaS API integrations

CLOUD & DEVOPS

AWS (EC2/ECS/S3/Lambda/VPC), GCP, Docker, CI/CD (GitHub Actions, Fastlane, CircleCI), Nx Monorepo

LEADERSHIP

Mentorship, ADRs, Engineering-led ownership, Code reviews, Cross-functional collaboration, Stakeholder discovery, Documentation standards

QUALITY

TDD, Cucumber BDD, Playwright, Unit + Integration + E2E testing
