PROFILE

"Senior software engineer with over 10 years of experience building fintech and payments infrastructure. Deep expertise in transactional Postgres, double-entry ledgers, KYC/EDD compliance, and integrations with banking and identity providers (Plaid, Treasury Prime). Strong TypeScript across the stack with NestJS, Prisma, and event-driven architectures designed for fault tolerance, idempotency, and auditability."

PROFESSIONAL EXPERIENCE

SELECTED ROLES & CONTRIBUTIONS

FINTECH FOR VC FUND
ADMINISTRATION

Sydecar

FULL-STACK SOFTWARE
ENGINEER

Double-Entry Ledger

POSTGRES

Contributed to a proprietary double-entry ledger engine (Fragment) with append-only immutable entries, deterministic idempotency keys (), derived balances (never stored as source of truth), and minor-unit integer accounting with banker's rounding. Posting flow is event-driven and fully reconstructable from source events.

POSTGRES

LEDGER

DOUBLE-ENTRY

DECIMAL

Plaid + Treasury Prime

BANKING

Worked on Plaid Link integration (createLinkToken → exchangePublicToken → access_token) with processor tokens powering ACH transfers via Treasury Prime. Built a mock banking engine for the local sandbox with idempotency tracking by application/account IDs.

PLAID

TREASURY PRIME

ACH

BANKING

KYC/EDD

COMPLIANCE

Designed and implemented Enhanced Due Diligence including LP funding blocks, UBO verification, FinCEN integration, CTA compliance, and automatic KYC revalidation for active investors. Built race-resistant verify-identity flow with re-check inside a to handle "email-free-at-blur → taken-at-submit" edge cases (409 EMAIL_NOW_EXISTS).

COMPLIANCE

KYC

UBO

FINCEN

Webhook Idempotency

CONCURRENCY

Implemented webhook dedup via (unique) with PROCESSING/PROCESSED/REJECTED state machine, and an API-level idempotency interceptor with 48h TTL scoped by .

IDEMPOTENCY

WEBHOOKS

CONCURRENCY

Fault Tolerance

BULLMQ OUTBOX

Standardized event delivery using BullMQ Pro with exponential backoff (5 retries / 3s base in ledger; 20 retries / 10s base in pubsub). Outbox pattern: persist resolution first, enqueue after — jobs are idempotent and survive enqueue failure. Global per-deal ordering via Redis INCR counters with deterministic predecessor lookup ().

BULLMQ

OUTBOX

REDIS

FAULT-TOLERANCE

Billing V2

ARCHITECTURE

Designed (ADR) and implemented fund billing V2 with quarterly fee scheduler, billing model versioning, and administrative fee structure management.

TS-REST

ZOD

NESTJS

QuickBooks

INTEGRATION

Built bidirectional invoice sync engine with mock service for local dev, state validation, auto-sync on approval, and full E2E test suite with Playwright and Cucumber BDD.

QUICKBOOKS API

PLAYWRIGHT

CUCUMBER

ts-rest

TYPE-SAFE
CONTRACTS

Migrated legacy controllers (auth, onboarding, admin) to type-safe ts-rest contracts with Zod schemas, improving type safety end-to-end.

B2B PAYMENTS & WHOLESALE

Zax

SR SOFTWARE ENGINEER

B2B Payments

MOBILE

Built from scratch a wholesale ordering app with integrated payment flows and credit-limit validation for business partners, using React Native, TypeScript, and GraphQL.

REACT NATIVE

TYPESCRIPT

GRAPHQL

Serverless

AWS

Deployed full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) with serverless web apps using React and Next.js.

AWS

NEXT.JS

SERVERLESS

CI/CD

AUTOMATION

Configured end-to-end delivery pipeline with GitHub Actions, Fastlane, and Code Climate for quality control. Docker for local dev.
