

Jonathan Cruz

SENIOR FULL-STACK ENGINEER · PRODUCT & PLATFORM

📍 SÃO PAULO, BRAZIL ✉ JONATHAN.WILLIAN.TOD@GMAIL.COM 🌐 AKAMURAASAI 🔗 AKAMURAASAI.WORK

PROFILE

"Senior full-stack engineer with 10+ years shipping production-grade systems end-to-end. Deep TypeScript across Next.js, NestJS, and React, with strong PostgreSQL + Prisma (and raw SQL when it makes more sense), REST/GraphQL API design, and AWS deployments. Comfortable across customer-facing UIs, internal tools, and SQL-heavy workflows — solving real operational problems without strict boundaries between frontend, backend, and platform concerns. Mission-aligned background: built systems for healthcare, governmentally-funded student loans, and compliance-critical fintech."

PROFESSIONAL EXPERIENCE

SELECTED ROLES & CONTRIBUTIONS

FINTECH PLATFORM Sydecar FULL-STACK SOFTWARE ENGINEER	Full-Stack TypeScript NEXT.JS + NESTJS + PRISMA Build product features across an Nx monorepo of dozens of NestJS libraries and React/Next.js apps backed by PostgreSQL via Prisma. Customer-facing UIs and internal operational tools alike, with end-to-end TypeScript discipline. TYPESCRIPTNEXT.JSNESTJSPRISMA
	Internal Tools OPERATIONS + COMPLIANCE WORKFLOWS Designed and shipped admin UIs and operational tools for compliance, finance, and ops teams: Billing V2 admin (quarterly fee scheduler, billing model versioning), KYC/EDD revalidation flows, ledger console for cash reconciliation. Same end-to-end ownership a workflow-heavy product platform needs. INTERNAL TOOLSOPS WORKFLOWSADMIN UI
	PostgreSQL + SQL DATA MODELING & PERFORMANCE Schema design, indexing, transaction isolation, and query performance tuning across dozens of services. Prisma for typical access patterns, raw SQL when needed (complex aggregations, reporting). Auxiliary tables with deterministic ordering for compliance review. POSTGRESQLSQLPRISMADATA MODELING
	Third-party Integrations REAL-WORLD EDGE CASES Built bidirectional QuickBooks invoice sync engine with OAuth 2.0, state validation, auto-sync on approval, mock service for local dev, and full E2E suite (Playwright + Cucumber BDD). Worked on Plaid + Treasury Prime integrations. Hands-on with auth flows, refresh tokens, retry/backoff, and failure-mode debugging. QUICKBOOKSPLAIDTREASURY PRIMEOAUTH
	Production Debugging DATADOG + AUDIT TRAILS Diagnose and resolve issues across application code, data, AWS services, and operational workflows. Integrated Datadog for tracing, metrics, alerting. Designed audit-friendly state machines and append-only event chains — reconstructable history for production debugging. DATADOGDEBUGGINGAUDITOBSERVABILITY
	AWS Production LAMBDA + S3 + SECRETS Built and operated services on AWS Lambda with Secrets Manager-style credential handling and S3 storage. Earlier at Zax: full AWS infrastructure (EC2, ECS, S3, Lambda, VPCs) including containerized workloads. AWS LAMBDA S3ECSSECRETS
	Cross-functional Partnership NO PM Drove Billing V2 end-to-end without a PM, partnering directly with compliance, finance, and product. Engineering-led ownership translates to working closely with ops, customer success, and fulfillment teams in a workflow-heavy environment. ADRS CROSS-FUNCTIONALDISCOVERY

MAY 2023 — PRESENT
SAN FRANCISCO, CA (REMOTE)

B2B CLOUD PLATFORM Zax SR SOFTWARE ENGINEER JAN 2019 — MAY 2023 SÃO PAULO	Full-Stack Product REACT NATIVE + NEXT.JS + GRAPHQL Built from scratch a B2B wholesale ordering platform with React Native for mobile, React/Next.js for web, TypeScript, and GraphQL. Integrated payment flows and credit-limit validation across the stack. REACT NATIVE NEXT.JS GRAPHQL TYPESCRIPT AWS Infrastructure PRODUCTION OPERATIONS Deployed and operated full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) with serverless React/Next.js apps. Containerized with Docker. Owned operational health and debugging of customer-facing production. AWS ECS DOCKER LAMBDA CI/CD QUALITY GATES Configured end-to-end pipeline with GitHub Actions, Fastlane, and Code Climate for automated quality gates. Reduced release cycle from weeks to days. GITHUB ACTIONS FASTLANE CI/CD
CONSUMER PLATFORM Netlolo SR SOFTWARE ENGINEER SEP 2018 — JAN 2019 SÃO PAULO	Real-time SDK PERSISTENT CONNECTIONS Designed and shipped a chat SDK with React Native and React/Redux on top of XMPP and a Java backend — persistent connections, message ordering, low-latency delivery for businesses embedding chat into their apps. XMPP REAL-TIME SDK PERSISTENT CONNECTIONS Consumer Product REACT NATIVE + WEB3 Built a mobile and web product bringing cryptocurrency to mainstream users with React Native and TypeScript, integrating Web3 smart contracts on Ethereum. REACT NATIVE TYPESCRIPT WEB3 Zero-downtime CI/CD CONTINUOUS DEPLOYMENT Built CI/CD automations ensuring continuous deployment without service interruption. PostgreSQL with Hasura as the GraphQL layer. POSTGRESQL HASURA CI/CD
CONSUMER HEALTHCARE Escale SR SOFTWARE ENGINEER JAN 2018 — SEP 2018 SÃO PAULO	Mentorship TECH TALKS LEAD Led internal Tech Talks on RESTful design, Functional Programming, and Microservices architecture, coaching engineers across product teams. Established service-boundary and API-contract patterns adopted across the engineering org. MENTORSHIP TECH TALKS MICROSERVICES Healthcare Foundation MULTI-DB MICROSERVICES Built the consumer healthcare product foundation with React, Redux, and a Node.js/TypeScript backend. Selected MySQL, PostgreSQL, MongoDB per service responsibility with hands-on operational ownership — same mission-driven, compliance-aware data discipline applies to education domains. MICROSERVICES MYSQL POSTGRESQL MONGODB
EDTECH PraValer PL SOFTWARE ENGINEER JUN 2017 — JAN 2018 SÃO PAULO	EdTech Platform LOANS FOR STUDENTS Led migration of a legacy PHP loan origination platform to a Node.js/Express backend for a student loans product with governmental funding. Education-domain experience with workflow-heavy enrollment, eligibility, and disbursement flows for governmental-funded student access. EDTECH NODE.JS STUDENT LOANS SQL Performance SCHEMA & INDEXING Restructured PostgreSQL transactional tables with improved schemas and indexes, eliminating N+1 queries and reducing query times by an order of magnitude. MongoDB for unstructured logs and request data. POSTGRESQL MONGODB QUERY OPTIMIZATION

CORE SKILLS

FULL-STACK

TypeScript, Next.js, React (hooks, context, Redux), React Native, NestJS, Node.js, GraphQL, REST APIs, ts-rest, Zod

DATA

PostgreSQL (deep), Prisma, MySQL, MongoDB, Redis, Raw SQL when appropriate, Query optimization, Schema design, Indexing

INTEGRATIONS

OAuth 2.0, JWT, Third-party APIs (QuickBooks, Plaid, Treasury Prime), Webhook deduplication, Idempotency, Retry/backoff

AWS

Lambda, S3, ECS, EC2, VPC, RDS-adjacent (PostgreSQL deployments), Secrets management, Docker

QUALITY & DEBUGGING

Datadog observability, Structured logging, Audit trails, Playwright, Cucumber BDD, TDD, Production debugging

INTERNAL TOOLS & WORKFLOWS

Admin dashboards, Operational tools, Reporting workflows, Cross-functional partnership (compliance, finance, ops)

AI ENGINEERING

Claude Code (daily), Sub-agent orchestration, MCP servers, Prompt engineering, LLM-assisted development

LANGUAGES

PORTUGUESE

Native

ENGLISH

C1/C2

EDUCATION

Anhanguera

BACHELOR OF TECHNOLOGY (B.TECH.) IN INFORMATION TECHNOLOGY ·
JAN 2016 — JUL 2018
