

Jonathan Cruz

SENIOR FULL-STACK ENGINEER · INTERNAL PLATFORM & DEVEX

📍 SÃO PAULO, BRAZIL ✉ JONATHAN.WILLIAN.TOD@GMAIL.COM 🌐 AKAMURAASAI 🔗 AKAMURAASAI.WORK

PROFILE

"Senior full-stack engineer with 10+ years building internal platforms, developer tooling, and stakeholder-facing dashboards that engineering teams trust day-to-day. Deep TypeScript across the stack — React, Next.js, NestJS, Postgres — with strong async/event-driven systems (BullMQ, outbox), REST APIs, and Datadog observability. Daily user of AI coding tools (Claude Code with sub-agents, custom skills, MCP integrations, hooks) — actively shaping how an engineering team adopts and operates AI workflows. Care about developer experience: clean APIs, predictable automation, and clear feedback loops."

PROFESSIONAL EXPERIENCE

SELECTED ROLES & CONTRIBUTIONS

FINTECH PLATFORM Sydecar FULL-STACK SOFTWARE ENGINEER	AI Engineering PRODUCTION CLAUDE CODE USAGE Daily user of Claude Code with sub-agent orchestration, MCP server integrations, custom project skills, pre/post-tool hooks for guardrails, and project-level specifications. Apply spec-driven workflows for code generation, eval-style review, and automated testing. Shape how the team adopts AI tooling. CLAUDE CODEMCPSUB-AGENTSAI TOOLING
	Internal Tools & Dashboards REACT + NEXT.JS Built admin UIs, dashboards, and operational tools for internal stakeholders — Billing V2 admin (quarterly fee scheduler, billing model versioning), KYC/EDD revalidation flows, compliance dashboards. Worked across an Nx monorepo of dozens of NestJS libraries and React/Next.js apps. REACTNEXT.JSINTERNAL TOOLS DASHBOARDS
	Async Workflows & Job Queuing BULLMQ + OUTBOX Standardized event delivery using BullMQ Pro with exponential backoff (5 retries / 3s base; 20 retries / 10s base for pubsub). Outbox pattern: persist resolution first, enqueue after — jobs idempotent and survive enqueue failure. Global per-deal ordering via Redis INCR counters with deterministic predecessor lookup. BULLMQOUTBOXASYNCJOB QUEUEING
	Clean REST APIs TYPE-SAFE CONTRACTS Migrated legacy controllers (auth, onboarding, admin) to type-safe ts-rest contracts with Zod schemas, eliminating contract-mismatch bugs and giving consumer teams a predictable, self-documenting API surface. Same DevEx mindset transfers to internal platform APIs. REST APISTS-RESTZODDEVEX
	Observability DATADOG + AUDIT TRAILS Integrated Datadog for tracing and alerting on critical paths. Designed audit-friendly state machines and append-only auxiliary tables with deterministic ordering for reproducible event chains. Same observability discipline applies to ML pipeline monitoring. DATADOGOBSERVABILITYAUDIT
	Quality & Validation TDD + CUCUMBER BDD Built full E2E test suite for QuickBooks integration using Playwright and Cucumber BDD with mock services. Treated tests, evaluation, and validation as first-class delivery concerns — runs in CI on every PR. PLAYWRIGHTCUCUMBER BDDVALIDATION
	Cross-team Collaboration ENGINEERING-LED OWNERSHIP Drove Billing V2 design and delivery end-to-end without a PM, partnering with compliance, finance, and product teams. Documented decisions via ADRs and project-level conventions. Acted as a supportive resource for engineers integrating with platform primitives (idempotency interceptor, webhook dedup, outbox). ADRS CROSS-FUNCTIONALDOCUMENTATION
MAY 2023 — PRESENT SAN FRANCISCO, CA (REMOTE)	

B2B CLOUD PLATFORM Zax SR SOFTWARE ENGINEER JAN 2019 — MAY 2023 SÃO PAULO	Cloud Infrastructure AWS OPERATIONS Deployed and operated full cloud infrastructure on AWS (EC2, ECS, S3, Lambda, VPCs) supporting high-availability workloads. Containerized services with Docker for consistent dev-to-prod parity. Owned operational health of production deployments end-to-end. AWS ECS DOCKER LAMBDA Full-Stack Product REACT NATIVE + NEXT.JS + GRAPHQL Built from scratch a B2B wholesale ordering platform with React Native (mobile), React/Next.js (web), and GraphQL API layer. REACT NATIVE NEXT.JS GRAPHQL TYPESCRIPT Delivery Automation CI/CD Configured end-to-end pipeline with GitHub Actions, Fastlane, and Code Climate for automated quality gates. Reduced release cycle from weeks to days by treating release-time toil as an engineering problem. GITHUB ACTIONS FASTLANE CI/CD
REAL-TIME PLATFORM Netlolo SR SOFTWARE ENGINEER SEP 2018 — JAN 2019 SÃO PAULO	Real-time Streaming SDK ARCHITECTURE Designed and shipped a chat SDK with React Native and React/Redux on top of XMPP and a Java backend — persistent connections, message ordering, low-latency delivery. Same primitives as modern streaming AI responses and real-time observability feeds. XMPP REAL-TIME SDK STREAMING Crypto Consumer Product REACT NATIVE + WEB3 Built a mobile and web product bringing cryptocurrency to mainstream users with React Native and TypeScript, integrating Web3 smart contracts on Ethereum. REACT NATIVE TYPESCRIPT WEB3 Zero-downtime CI/CD CONTINUOUS DEPLOYMENT Built CI/CD automations ensuring continuous deployment without service interruption. PostgreSQL with Hasura as the GraphQL layer. POSTGRESQL HASURA CI/CD
MICROSERVICES PLATFORM Escale SR SOFTWARE ENGINEER JAN 2018 — SEP 2018 SÃO PAULO	Mentorship TECH TALKS Led internal Tech Talks on RESTful design, Functional Programming, and Microservices architecture, coaching engineers across product teams. Established service-boundary and API-contract patterns adopted across the engineering org — sharing knowledge generously to grow the team together. MENTORSHIP TECH TALKS MICROSERVICES Microservices MULTI-DB Built the product foundation with React, Redux, and a Node.js/TypeScript backend. Selected MySQL, PostgreSQL, and MongoDB per service responsibility and drove DB design across teams. REACT NODE.JS MONGODB CIRCLECI
BACKEND & DATA PraValer PL SOFTWARE ENGINEER JUN 2017 — JAN 2018 SÃO PAULO	Legacy Modernization PHP → NODE Led migration of legacy PHP origination platform to Node.js/Express for a student loans product, modernizing API surface while preserving downstream compatibility. NODE.JS EXPRESS LEGACY MIGRATION Database Performance SCHEMA & INDEXING Restructured PostgreSQL transactional tables with improved schemas and indexes, eliminating N+1 queries and reducing query times by an order of magnitude. MongoDB for unstructured logs and request data. POSTGRESQL MONGODB QUERY OPTIMIZATION

CORE SKILLS

FULL-STACK

TypeScript, React, Next.js, React Native, NestJS, Node.js, GraphQL, REST APIs, ts-rest, Zod

AI ENGINEERING

Claude Code (daily), Sub-agent orchestration, MCP servers, Custom skills/hooks, Spec-driven development, Prompt engineering, LLM workflows

ASYNC & JOB QUEUING

BullMQ, Outbox pattern, Redis, Event ordering, Idempotency, Webhook deduplication

CLOUD & DEVOPS

AWS (EC2/ECS/S3/Lambda/VPC), GCP, Docker, CI/CD (GitHub Actions, Fastlane, CircleCI), Nx Monorepo

DATA

PostgreSQL (deep), MySQL, MongoDB, Prisma, Query optimization, Schema design

OBSERVABILITY

Datadog, Structured logging, Audit trails, State-machine instrumentation

QUALITY

TDD, Cucumber BDD, Playwright, E2E/unit/integration testing

DEVEX & COLLABORATION

Internal tooling, ADRs, Documentation, Mentorship, Cross-functional partnership

LANGUAGES

PORTUGUESE

Native

ENGLISH

C1/C2

EDUCATION

Anhanguera

BACHELOR OF TECHNOLOGY (B.TECH.) IN INFORMATION TECHNOLOGY ·
JAN 2016 — JUL 2018
